

Dreamz

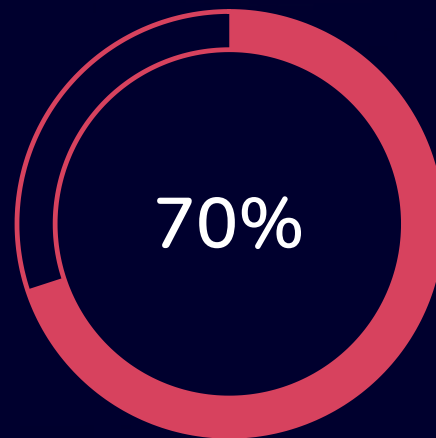

Adaptive sleep mask that improves sleep using personalized closed-loop neurostimulation.

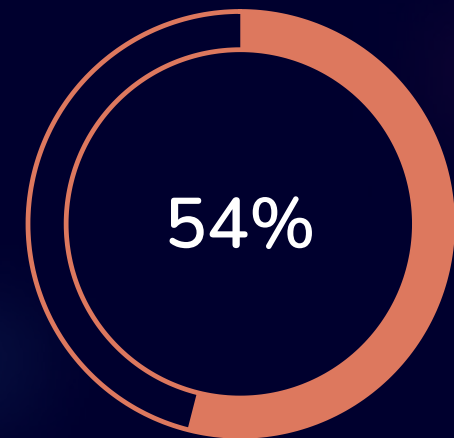

The Problem Sleep Deprivation

Adults have trouble sleeping

Higher likelihood to be involved
in workplace accidents by
sleep-deprived workers

Women have trouble falling
asleep during menopause

The Solution

Active Sleep Mask

Improves Sleep Quality Using
Personalized Brain Modulation

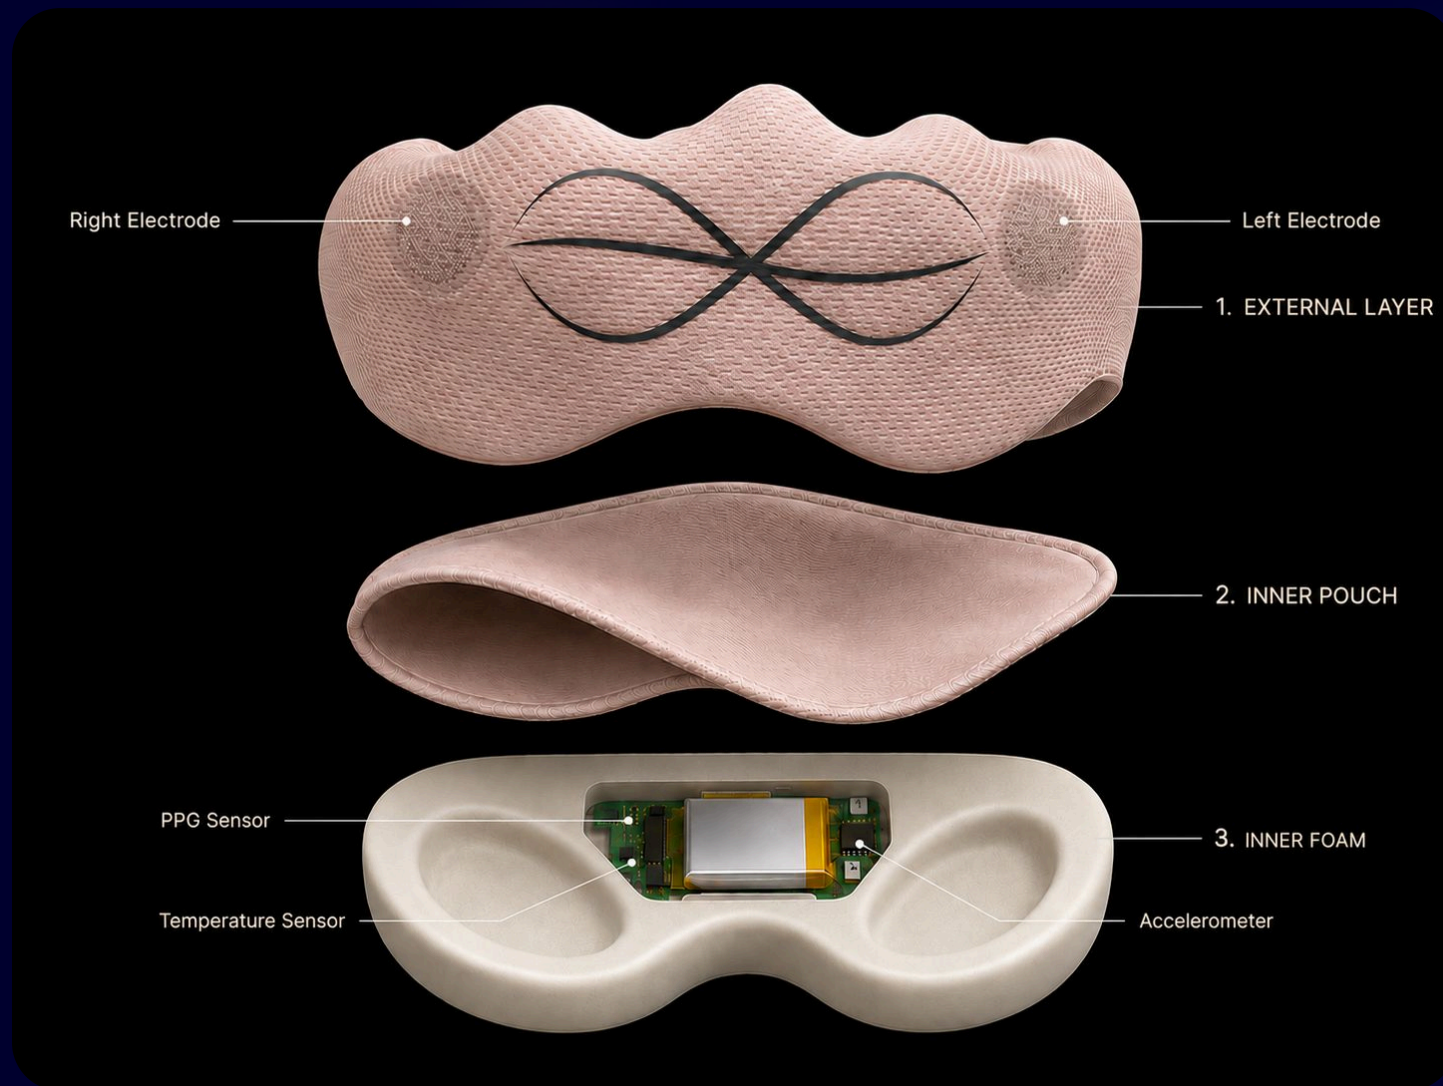

Comfortable & User-Friendly

Based on proven scientific
research

How It Works

- Uses gentle electrical stimulation to guide the brain from an alert state into a natural sleep-ready state.
- Promotes a calm, meditative state by quieting excessive neural activity and activating the body's relaxation response.
- Supports the body's natural sleep processes while AI continuously personalizes stimulation using real-time physiological signals.

Technology & Clinical Validation

We made a smart sleep mask prototype , equipped with custom electrodes, delivering simple stimuli to prove HR reduction and HRV increase which resulted in sleep onset reduction

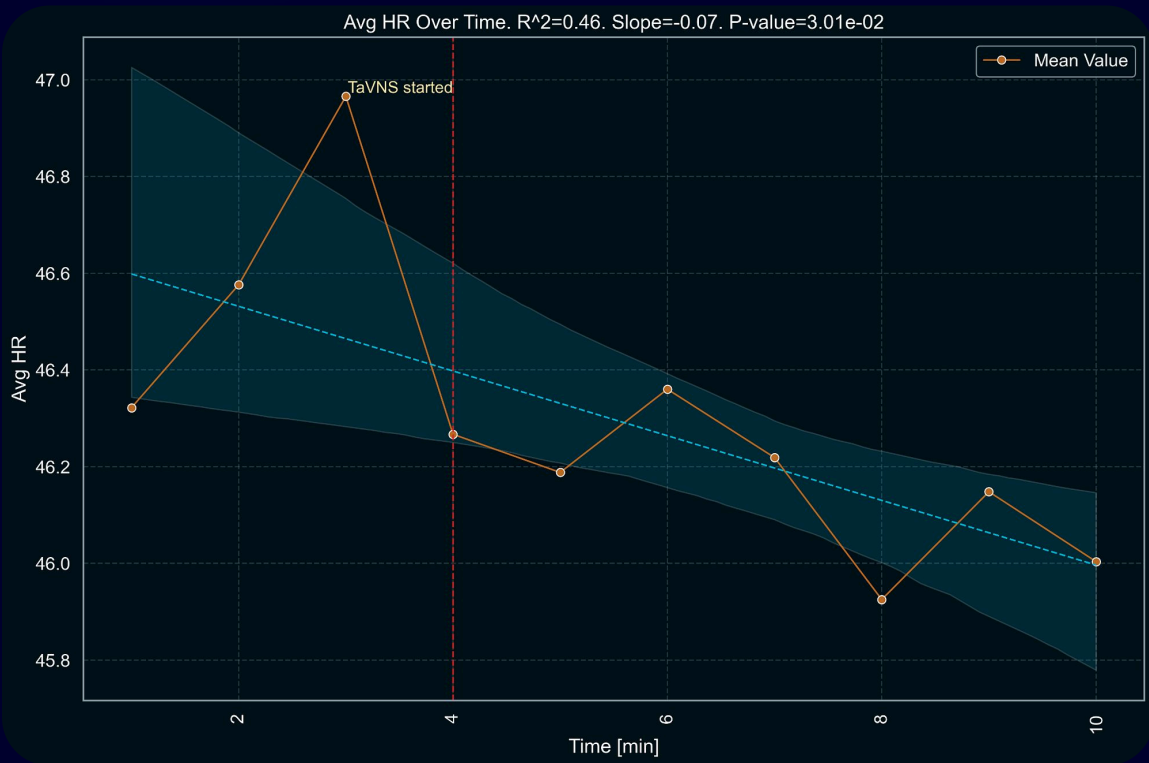

1

Dreamz achieved a normalized 19.4% improvement across standardized metrics for sleep quality, mood, and cognitive sharpness

2

Heart rate showed statistically significant decrease following stimulation, indicating activation of calming parasympathetic pathways

The Team

CEO

Nir Cafri, Ph.D

AI specialist, expert in deep learning and pioneer in clinical neuroscience data analytics.

CPO

Ellie Bleiberg

Ex-Google, Haas MBA, 5+ years as a PM building and scaling B2B and B2C products.

CSO

Prof. Felix Benninger, MD; Ph.D

Clinical neurologist expert in electrophysiological techniques and epileptogenesis
